

The Brain Subject and the Author of the Articles

By Robert Naeslund, 2013

Here is the first of a series of articles to be published about a topic that has been developed in secrecy, and that is known almost only to those involved and their victims. The issue is modern brain research, involving medical abuses and doctors misuse of their patients for critical experimentation. It's about scientific progress and the price that many people have had to pay even though they never accepted to involve themselves, being unwitting or unwilling participants for a life time of remote controlled brain experiments.

My name is Robert Naeslund and the issue to be covered is in many ways one with my life, but in different aspects during varied times. From being a victim with personal experiences, I liberated myself and started to research the topic, writing a book, make reports, articles and lecturing on this hidden agenda to open up a public debate.

The following articles are not addressing my case in particular, but the subject as a whole. For me it all began in my youth, at Stockholm's South Hospital (Södersjukhuset) when I was admitted for an operation. The surgeon implanted electrodes in my brain without my knowing and after that I was used for brain experimentation which went on for many years. I had no understanding of what I was exposed to, but on discovering the reality I began trying to prove it. No doctors in Sweden would to help me. Later I came into contact with the Swedish-American Professor Petter Aron Lindstrom at the University of California who helped me in many ways, together with other doctors at that university. He was the first one who confirming the presence of implants in my brain. (Part of his letter beside.)

Mr. Robert Naeslund

Dear Mr. Naeslund:

In response to your most recent letter regarding the roentgen films I can only confirm that some foreign objects, most likely brain transmitters, have been implanted at the base of your frontal brain and in the skull.

The risk of such implantations is considerable and the risk of chronic infections and meningitis when the implantation has been made through the nose or the sinuses are real issues.

In my opinion, there is no excuse for such implantations if the patient has not been fully informed about the procedures, the purposes, the risks, the method of anesthesia, etc, and then gives a clear written consent.

I fully agree with Lincoln Lawrence, who in his book on page 27 wrote: "There are two particularly dreadful procedures which have been developed. Those working and playing with them secretly call them R.H.I.C. and E.D.O.M.--Radio-Hypnotic Intracerebral Control and Electronic Dissolution of Memory."

From that time I gained support from several leading people in Sweden, both within media and legal sectors. Magazines wrote about my case, electronic companies detected the frequencies broadcasted from the Defense Departments Radio Station, the Red Cross acted and the Chairman of the Supreme Governmental Court, Gustav Petrén contributed by finding a hospital abroad. Swedish doctors did everything they could to prevent my case being exposed and even contacted psychiatrists whom

told me that if I continued with my activities, I would be declared as mentally ill. Professors at the famous University Hospital, Karolinska Sjukhuset in Stockholm, contacted Dr Lindstrom and tried to stop his help to me. Several other leading medical doctors acted against me, only with the intention to prevent any disclosures of the crimes they themselves were committing. The government became involved, but was only interested in covering my case. **For those who want to know more about this subject, which represents a scaring issue for all people when became a patient at any hospital, risks of being implanted and exploited by the biomedical researchers. Watch my lecture at <http://www.youtube.com/watch?v=ei3zla5hS9o>**
